

KAUSTUBH JADHAV

Senior Full Stack Developer

MERN / MEAN · AI-AUGMENTED WEB ENGINEERING · CLOUD NATIVE

Pune, India · +91 88502 95744 · kaustubhjadhav36@gmail.com · [Portfolio](#) · [GitHub](#) · [LinkedIn](#)

PROFESSIONAL SUMMARY

Senior Full Stack Developer with 4.5+ years building scalable web platforms on MERN, MEAN, and cloud-native stacks. Production experience shipping high-performance APIs, real-time dashboards, and microservices on Azure Kubernetes Service. Currently extending into AI-augmented full-stack development — integrating LLM features (OpenAI, Anthropic Claude), Retrieval-Augmented Generation pipelines, LangChain / LangGraph agent workflows, and Model Context Protocol (MCP) servers into production web apps. Strong system design and microservice fundamentals, with a bias for clean, testable, observable code.

TECHNICAL SKILLS

FRONTEND	Angular, React, Next.js, TypeScript, RxJS, Redux, Tailwind CSS, HTML5, CSS3, Flutter
BACKEND	Node.js, Express.js, NestJS, REST APIs, GraphQL, WebSockets, Microservices, JWT / OAuth2
AI / LLM	OpenAI API, Anthropic Claude API, LangChain, LangGraph, Retrieval-Augmented Generation (RAG), Vector Databases (Pinecone, Chroma, pgvector), Embeddings, Prompt Engineering, Tool / Function Calling, Model Context Protocol (MCP) servers, Streaming, Token & cost optimization
CLOUD / DEVOPS	Microsoft Azure, Azure Kubernetes Service (AKS), Docker, Kubernetes, CI/CD (GitHub Actions, Azure DevOps), Nginx
DATABASES	MongoDB, MySQL, PostgreSQL, Redis
PRACTICES	System Design, Microservices, Agile / Scrum, Code Reviews, Pair Programming, Git, GitHub

PROFESSIONAL EXPERIENCE

Senior Software Developer — Tech Mahindra

Nov 2022 — Present

- Architected and shipped enterprise-grade web platforms on a MEAN stack, owning design decisions across the frontend, API, and data layers.
- Boosted frontend load performance by ~35% through lazy loading, code-splitting, and change-detection tuning, and reduced average API response times by ~30% via query optimization and Redis caching.
- Operated production workloads on Azure Kubernetes Service (AKS) — containerization, rolling deployments, autoscaling, and incident response.
- Built and released cross-platform Flutter applications integrated with existing Node.js backends.
- Delivered executive-level Power BI dashboards backed by curated REST APIs over MongoDB and MySQL sources.
- Prototyped LLM-assisted internal tools (document Q&A, knowledge search, drafting assistants) using OpenAI APIs, LangChain, and a RAG pipeline over internal documents.
- Led code reviews and mentored junior engineers on TypeScript, RxJS, and clean API design.

Stack: Angular · Node.js · NestJS · MongoDB · MySQL · Azure · AKS · Docker · Flutter · LangChain · OpenAI API

Client Engineer — PPLwork

Feb 2022 — Sep 2022

- Built high-performance MERN-stack applications for client-facing products with a focus on responsive UX and reliable APIs.
- Improved frontend render speed by ~25% and cut API latency by ~20% through component memoization, bundle optimization, and query tuning.
- Drove engineering improvements in module structure, error handling, and testability through rigorous code review.
- Improved team velocity via pair programming and shared component libraries.

Stack: React · Node.js · Express · MongoDB

Full Stack Developer — Wingrow Agritech

Oct 2021 — Feb 2022

- Developed an agricultural SaaS platform on React + Node.js supporting multi-role user management and operations workflows.
- Deployed infrastructure on Microsoft Azure with automated CI/CD.
- Built analytics dashboards for crop and logistics KPIs.

Stack: React · Node.js · MongoDB · Azure

KEY PROJECTS

AI Knowledge Assistant — RAG + LangGraph + MCP

Next.js · LangChain · Pinecone · OpenAI

- Built a Retrieval-Augmented Generation assistant answering questions over a private document corpus with cited sources.
- Implemented chunking, embeddings, and semantic search over a Pinecone vector store; exposed retrieval as a LangChain tool.
- Orchestrated multi-step reasoning (plan → retrieve → draft → self-check) with a LangGraph state machine and tool-calling agents.
- Connected the agent to an MCP server exposing internal tools (search, ticket lookup, calendar) as standardized capabilities, and streamed token-by-token responses to a Next.js frontend via React Server Components and SSE.

Supply Chain Analytics Dashboards

Angular · NestJS · MySQL · MongoDB

- Enterprise dashboards monitoring logistics, shipment flows, and warehouse performance in real time.
- Built reusable, interactive chart components powering enterprise reporting modules; integrated multiple upstream APIs for shipment and warehouse data.

Agritech Management Platform

React · Node.js · MongoDB · Azure

- Full-stack MERN SaaS digitizing farm operations, crop management, and logistics tracking with multi-role access control.
- Deployed on Microsoft Azure with CI/CD pipeline automation and zero-downtime releases.

NFT Gallery on Solana

React · Solana Web3.js · Node.js

- Decentralized NFT showcase with Phantom wallet authentication and real-time metadata rendering via Solana Web3 APIs.
- Modular component architecture designed for marketplace-style extensions.

EDUCATION

B.E., Mechanical Engineering
Vishwakarma Institute of Technology, Pune

CERTIFICATIONS

- Full Stack Web Development with MERN
- Full Stack Web Development with MEAN
